1. SALESFORCE DEVELOPER ACCOUNT CREATION

Introduction

Salesforce is a cloud-based Customer Relationship Management (CRM) platform that helps organizations manage customers, sales, business processes, communication, and data in a centralized environment. For the Chai Shop & Co. project, a Salesforce Developer account is used as the development environment to create objects, fields, page layouts, record types, validation rules, automation, reports, and dashboards.

Activity 1.1 - Creating Developer Account

Aim

To create a Salesforce Developer account for developing and implementing the Chai Shop & Co. CRM application.

Procedure

1. Open the Salesforce Developer registration page.
2. Enter the required personal information.
3. Provide a valid email address.
4. Enter the required organization and role details.
5. Create a unique Salesforce username.
6. Accept the required terms and conditions.
7. Click Sign Up.
8. A confirmation message is displayed after successful registration.

Result

The Salesforce Developer account was successfully created and prepared for project implementation.

SCREENSHOT PLACEHOLDER

Insert the corresponding Salesforce screenshot here.

Figure 1.1: Salesforce Developer Account Registration

Activity 1.2 - Account Activation

Aim

To activate the Salesforce Developer account and access the Salesforce development environment.

Procedure

1. Open the email received from Salesforce.

2. Click the account verification or activation link.
3. Set a secure password.
4. Complete the required account verification process.
5. Log in to Salesforce using the registered username and password.
6. Open Setup to access the Salesforce configuration environment.

Result

The Salesforce Developer account was successfully activated, and the Salesforce development environment was accessed.

2. OBJECTS

Introduction

Objects are the fundamental data structures in Salesforce used to store and organize information. They are similar to tables in a relational database. For the Chai Shop & Co. project, separate account-related objects are used to organize employer, customer, and enterprise information.

Activity 2.1 - Employer Account Object

Aim

To create an Employer Account object for storing employer-related information.

Procedure

1. Navigate to Setup.
2. Open Object Manager.
3. Click Create and select Custom Object.
4. Enter the object label as Employer Account.
5. Enter the plural label.
6. Configure the record name.
7. Configure the required object settings.
8. Click Save.

Result

The Employer Account object was successfully created to maintain employer-related information.

SCREENSHOT PLACEHOLDER

Insert the corresponding Salesforce screenshot here.

Figure 2.1: Employer Account Object

Activity 2.2 - Customer Account Object

Aim

To create a Customer Account object for managing customer information.

Procedure

1. Open Setup → Object Manager.
2. Select Create → Custom Object.
3. Enter the object label as Customer Account.
4. Configure the record name and required settings.
5. Enable the required features.
6. Click Save.

Result

The Customer Account object was successfully created for storing and managing customer information.

SCREENSHOT PLACEHOLDER

Insert the corresponding Salesforce screenshot here.

Figure 2.2: Customer Account Object

Activity 2.3 - Enterprise Account Object

Aim

To create an Enterprise Account object for managing information related to enterprise customers.

Procedure

1. Navigate to Setup → Object Manager.
2. Select Create → Custom Object.
3. Enter the object label as Enterprise Account.

4. Configure the record name.
5. Enable the required features.
6. Click Save.

Result

The Enterprise Account object was successfully created to manage enterprise-level customer information.

SCREENSHOT PLACEHOLDER

Insert the corresponding Salesforce screenshot here.

Figure 2.3: Enterprise Account Object

3. TABS

Activity 3.1 - Custom Tabs Creation

Aim

To create custom tabs for accessing the objects used in the Chai Shop & Co. application.

Procedure

1. Open Setup.
2. Search for Tabs in the Quick Find box.
3. Open Tabs.
4. Under Custom Object Tabs, click New.
5. Select the required custom object.
6. Select an appropriate tab style.
7. Configure tab visibility.
8. Click Next and save the configuration.
9. Repeat the process for the remaining custom objects.
10. Verify the tabs using the App Launcher.

Result

Custom tabs were successfully created for accessing the Employer Account, Customer Account, and Enterprise Account objects.

SCREENSHOT PLACEHOLDER

Insert the corresponding Salesforce screenshot here.

Figure 3.1: Custom Tabs

4. THE LIGHTNING APP

Activity 4.1 - Creating a Lightning App

Aim

To create a dedicated Salesforce Lightning application for the Chai Shop & Co. project.

Procedure

1. Navigate to Setup.
2. Search for App Manager.
3. Click New Lightning App.
4. Enter the application name as Chai Shop & Co.
5. Enter the application description.
6. Configure the application branding.
7. Select the required navigation items.
8. Add the custom tabs created for the project.
9. Configure user access.
10. Click Save & Finish.
11. Open the App Launcher and select the newly created application.

Result

The Chai Shop & Co. Lightning App was successfully created and configured with the required project components.

SCREENSHOT PLACEHOLDER

Insert the corresponding Salesforce screenshot here.

Figure 4.1: Chai Shop & Co. Lightning App

5. GLOBAL PICKLIST

Activity 5.1 - Creating a Global Picklist

Aim

To create a reusable Global Picklist that provides standardized values across the Salesforce application.

Procedure

1. Open Setup.
2. Search for Picklist Value Sets.
3. Click New.
4. Enter the Global Value Set name.
5. Add the required picklist values.
6. Select the required options.
7. Click Save.
8. Use the Global Value Set while creating the required picklist fields.

Result

A Global Picklist was successfully created to maintain consistent values throughout the project.

SCREENSHOT PLACEHOLDER

Insert the corresponding Salesforce screenshot here.

Figure 5.1: Global Picklist

6. FIELDS & RELATIONSHIPS

Introduction

Fields are used to store individual pieces of information in Salesforce records. Relationships connect different objects and allow related information to be associated.

Activity 6.1 - Custom Fields for Employer Account

Aim

To create custom fields required for maintaining Employer Account information.

Procedure

1. Open Setup → Object Manager.
2. Select Employer Account.
3. Open Fields & Relationships.
4. Click New.
5. Select the appropriate data type.

6. Enter the field label.
7. Configure the field properties.
8. Set field-level security.
9. Add the field to the appropriate page layout.
10. Click Save.
11. Repeat the process for all required fields.

Result

The required custom fields were successfully created for the Employer Account object.

SCREENSHOT PLACEHOLDER

Insert the corresponding Salesforce screenshot here.

Figure 6.1: Employer Account Custom Fields

Activity 6.2 - Custom Fields for Customer Account

Aim

To create custom fields for storing customer-related information.

Procedure

1. Navigate to Setup → Object Manager.
2. Select Customer Account.
3. Open Fields & Relationships.
4. Click New.
5. Select the required field type.
6. Enter the field label and description.
7. Configure the field properties.
8. Set field-level security.
9. Add the field to the required page layout.
10. Save the field.

Result

The required custom fields were successfully created for the Customer Account object.

SCREENSHOT PLACEHOLDER

Insert the corresponding Salesforce screenshot here.

Figure 6.2: Customer Account Custom Fields

Activity 6.3 - Custom Fields for Enterprise Account

Aim

To create custom fields for storing enterprise customer information.

Procedure

1. Navigate to Setup → Object Manager.
2. Select Enterprise Account.
3. Open Fields & Relationships.
4. Click New.
5. Select the appropriate field type.
6. Enter the field label.
7. Configure the field properties.
8. Set field-level security.
9. Add the field to the page layout.
10. Click Save.

Result

The required custom fields were successfully created for the Enterprise Account object.

SCREENSHOT PLACEHOLDER

Insert the corresponding Salesforce screenshot here.

Figure 6.3: Enterprise Account Custom Fields

7. PAGE LAYOUTS

Introduction

Page layouts determine how fields, sections, buttons, and related lists are displayed on Salesforce record pages. Different layouts can be created to support different business processes.

Activity 7.1 - Online Orders Page Layout

Aim

To create a page layout for managing online orders.

Procedure

1. Open Setup → Object Manager.
2. Select the relevant order object.
3. Open Page Layouts.
4. Click New.
5. Enter the layout name as Online Orders Layout.
6. Add the required fields and sections.
7. Arrange the fields in an appropriate order.
8. Add required buttons and related lists.
9. Click Save.

Result

The Online Orders Page Layout was successfully created to display the information required for online orders.

SCREENSHOT PLACEHOLDER

Insert the corresponding Salesforce screenshot here.

Figure 7.1: Online Orders Page Layout

Activity 7.2 - Walk-In Orders Page Layout

Aim

To create a page layout for managing walk-in orders.

Procedure

1. Open the relevant object's Page Layouts.
2. Click New.
3. Enter the layout name as Walk-In Orders Layout.
4. Add the required fields.
5. Organize the fields into appropriate sections.
6. Add required buttons and related lists.
7. Click Save.

Result

The Walk-In Orders Page Layout was successfully created for managing walk-in orders.

SCREENSHOT PLACEHOLDER

Insert the corresponding Salesforce screenshot here.

Figure 7.2: Walk-In Orders Page Layout

8. RECORD TYPES

Introduction

Record Types allow different business processes and page layouts to be used for different categories of records. For this project, separate record types are created for Online Orders and Walk-In Orders.

Activity 8.1 - Online Orders Record Type

Aim

To create a record type specifically for online orders.

Procedure

1. Navigate to Setup → Object Manager.
2. Select the relevant order object.
3. Open Record Types.
4. Click New.
5. Enter the record type name as Online Orders.
6. Set the required record type properties.
7. Assign the Online Orders Page Layout.
8. Configure the required picklist values.
9. Assign the appropriate profiles.
10. Click Save.

Result

The Online Orders Record Type was successfully created and associated with the Online Orders Page Layout.

SCREENSHOT PLACEHOLDER

Insert the corresponding Salesforce screenshot here.

Figure 8.1: Online Orders Record Type

Activity 8.2 - Walk-In Orders Record Type

Aim

To create a record type specifically for walk-in orders.

Procedure

1. Open Setup → Object Manager.
2. Select the relevant order object.
3. Open Record Types.
4. Click New.
5. Enter the record type name as Walk-In Orders.
6. Assign the Walk-In Orders Page Layout.
7. Configure the required picklist values.
8. Assign the appropriate profiles.
9. Click Save.

Result

The Walk-In Orders Record Type was successfully created and associated with the Walk-In Orders Page Layout.

SCREENSHOT PLACEHOLDER

Insert the corresponding Salesforce screenshot here.

Figure 8.2: Walk-In Orders Record Type

9. VALIDATION RULES

Introduction

Validation Rules are used to ensure that users enter valid and complete information. They prevent records from being saved when specified conditions are not satisfied.

Activity 9.1 - Validation Rule on Employer Account

Aim

To ensure that valid information is entered into the Employer Account.

Procedure

1. Open Setup → Object Manager.
2. Select Employer Account.
3. Open Validation Rules.

4. Click New.
5. Enter a meaningful rule name.
6. Define the validation formula.
7. Enter an appropriate error message.
8. Select the error location.
9. Click Save.
10. Test the rule using valid and invalid records.

Result

A validation rule was successfully implemented on the Employer Account to improve data accuracy.

SCREENSHOT PLACEHOLDER

Insert the corresponding Salesforce screenshot here.

Figure 9.1: Employer Account Validation Rule

Activity 9.2 - Validation Rule on Customer Account

Aim

To ensure that customer records contain valid information.

Procedure

1. Navigate to Setup → Object Manager → Customer Account.
2. Select Validation Rules.
3. Click New.
4. Enter the rule name.
5. Define the required validation formula.
6. Enter the error message.
7. Select the error location.
8. Save and activate the rule.
9. Test the validation rule.

Result

A validation rule was successfully implemented on the Customer Account object.

SCREENSHOT PLACEHOLDER

Insert the corresponding Salesforce screenshot here.

Figure 9.2: Customer Account Validation Rule

Activity 9.3 - Validation Rule on Enterprise Account

Aim

To ensure that enterprise account records contain valid and complete information.

Procedure

1. Open Setup → Object Manager → Enterprise Account.
2. Select Validation Rules.
3. Click New.
4. Enter the rule name.
5. Define the required formula.
6. Enter the appropriate error message.
7. Select the error location.
8. Save and activate the rule.
9. Test the rule using sample records.

Result

A validation rule was successfully implemented on the Enterprise Account object to maintain data quality.

SCREENSHOT PLACEHOLDER

Insert the corresponding Salesforce screenshot here.

Figure 9.3: Enterprise Account Validation Rule

10. EMAIL TEMPLATE

Activity 10.1 - Email Template

Aim

To create a reusable email template for communicating with customers.

Procedure

1. Open Setup.

2. Search for Email Templates.
3. Click New Email Template.
4. Enter the template name.
5. Enter the email subject.
6. Compose the email body.
7. Insert appropriate merge fields where required.
8. Save the email template.
9. Preview and test the template.

Result

A reusable email template was successfully created for customer communication.

SCREENSHOT PLACEHOLDER

Insert the corresponding Salesforce screenshot here.

Figure 10.1: Email Template

Sample Email

Subject: Order Confirmation – Chai Shop & Co.

Dear Customer,

Thank you for placing your order with Chai Shop & Co.

Your order has been received successfully. We appreciate your support and look forward to serving you.

Regards,
Chai Shop & Co. Team

Activity 10.2 - Email Alert

Aim

To configure an email alert that sends the predefined email template automatically when the required automation condition is satisfied.

Procedure

1. Open Setup.
2. Search for Email Alerts.
3. Click New Email Alert.
4. Select the relevant object.

5. Enter the email alert description.
6. Select the previously created email template.
7. Select the required recipients.
8. Save the email alert.
9. Associate the email alert with the appropriate automation, such as a Flow.

Result

An Email Alert was successfully configured to automate customer communication.

SCREENSHOT PLACEHOLDER

Insert the corresponding Salesforce screenshot here.

Figure 10.2: Email Alert

11. FLOWS

Activity 11.1 - Schedule-Triggered Flow

Aim

To create a Schedule-Triggered Flow that automatically performs a predefined action at a scheduled time.

Procedure

1. Navigate to Setup → Flows.
2. Click New Flow.
3. Select Schedule-Triggered Flow.
4. Configure the start date and time.
5. Set the required frequency.
6. Select the object to be processed.
7. Define the entry conditions.
8. Add the required Flow elements.
9. Use Get Records when information from other records is required.
10. Use Decision to evaluate conditions.
11. Add Update Records, Create Records, or other required actions.
12. Click Save.
13. Use Debug to test the Flow.
14. Activate the Flow after successful testing.

Result

The Schedule-Triggered Flow was successfully created to automate the required business process at a scheduled time.

SCREENSHOT PLACEHOLDER

Insert the corresponding Salesforce screenshot here.

Figure 11.1: Schedule-Triggered Flow

12. REPORTS & DASHBOARDS

Introduction

Salesforce Reports are used to organize and analyze records. Dashboards provide a visual representation of report data through charts and other components.

Activity 12.1 - Customer Account Sales Report

Aim

To create a report that provides sales information related to customer accounts.

Procedure

1. Open the Chai Shop & Co. Lightning App.
2. Navigate to Reports.
3. Click New Report.
4. Select the appropriate report type.
5. Add the required fields.
6. Configure the required filters.
7. Group the records by Account or another appropriate field.
8. Summarize the sales amount where required.
9. Click Save & Run.
10. Enter the report name as Customer Account Sales Report.

Result

The Customer Account Sales Report was successfully created to analyze sales information associated with customer accounts.

SCREENSHOT PLACEHOLDER

Insert the corresponding Salesforce screenshot here.

Figure 12.1: Customer Account Sales Report

Activity 12.2 - Enterprise Account Sales Report

Aim

To create a report that provides sales information related to enterprise accounts.

Procedure

1. Navigate to Reports.
2. Click New Report.
3. Select the appropriate report type.
4. Add the required account and sales fields.
5. Configure filters to display enterprise account records.
6. Group the report by Account Name where required.
7. Summarize the sales amount.
8. Click Save & Run.
9. Enter the report name as Enterprise Account Sales Report.

Result

The Enterprise Account Sales Report was successfully created to analyze sales information associated with enterprise accounts.

SCREENSHOT PLACEHOLDER

Insert the corresponding Salesforce screenshot here.

Figure 12.2: Enterprise Account Sales Report

Activity 12.3 - Dashboard

Aim

To create a dashboard that visually represents important sales information from the project reports.

Procedure

1. Navigate to Dashboards.
2. Click New Dashboard.
3. Enter the dashboard name as Chai Shop & Co. Sales Dashboard.
4. Select the required folder.
5. Click Create.
6. Click + Component.

7. Select the Customer Account Sales Report.
8. Select a suitable visualization.
9. Add another component using the Enterprise Account Sales Report.
10. Configure the required dashboard components.
11. Save the dashboard.
12. Refresh the dashboard and verify the displayed information.

Result

The Chai Shop & Co. Sales Dashboard was successfully created to provide a visual summary of customer and enterprise sales information.

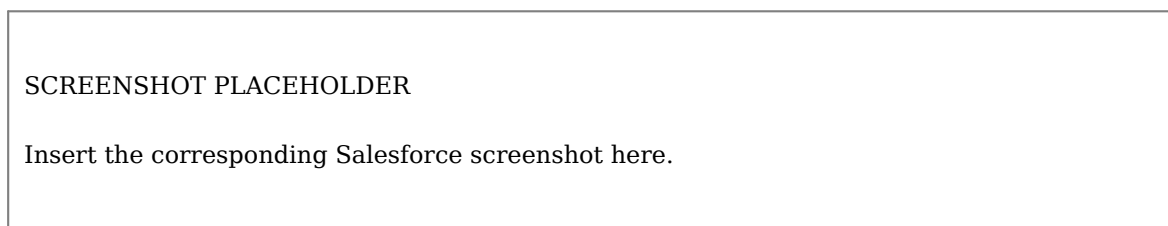

Figure 12.3: Chai Shop & Co. Sales Dashboard

Suggested Dashboard Components

Component	Purpose
Customer Account Sales	Displays customer-related sales information
Enterprise Account Sales	Displays enterprise-related sales information
Sales Summary	Provides an overall view of sales
Sales by Stage	Displays the distribution of sales opportunities

13. CONCLUSION

The Chai Shop & Co. Salesforce CRM project was successfully designed and implemented using Salesforce Lightning Experience. The project provided practical experience in configuring a Salesforce environment and developing a structured CRM solution.

The implementation included the creation and activation of a Salesforce Developer Account, Employer Account, Customer Account, and Enterprise Account objects. Custom tabs and a dedicated Lightning App were created to provide organized access to the application components.

A Global Picklist was configured to maintain consistent values, while custom fields and relationships were established to store the required business information. Separate page layouts and record types were created for Online Orders and Walk-In Orders, allowing the application to support different order processes.

Validation Rules were implemented to improve data accuracy and prevent invalid information from being entered. An Email Template and Email Alert were configured to support automated customer communication. A Schedule-Triggered Flow was created to automate the required business process according to a predefined schedule.

Finally, Customer Account Sales Report, Enterprise Account Sales Report, and a consolidated Sales Dashboard were created to analyze and visualize sales information.

Overall, this project provided practical knowledge of Salesforce administration, data management, user interface configuration, validation, email automation, Flow automation, reporting, and dashboard creation. It demonstrates how Salesforce can be used to develop a centralized CRM solution for managing business and customer-related processes efficiently.
