

Solution Requirements

Date	29-09-2026
Team ID	SWTID-2026-6268
Project Name	A CRM Application for The Chai Shop & Co.
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

- **Functional Requirements (FR)** define specific behaviors, functions, or features of the system (What the system should *do*).
- **Non-Functional Requirements (NFR)** specify the criteria that judge the operation of a system, rather than specific behaviors (How the system should *be*).

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority
1	Authentication	Users should securely log in to the Salesforce CRM using their Salesforce account credentials.	High
2	Authorization levels	The system should provide appropriate access and permissions for users to manage customer, employer, enterprise account and order information.	High

3	External interfaces	The CRM should use Salesforce Lightning Experience features such as Email Templates, Email Alerts and Salesforce Flow for business communication and automation.	Medium
4	Transactions processing	The system should manage Online Orders and Walk-In Orders using separate page layouts and record types, and maintain order information in Salesforce.	High
5	Reporting	The system should generate Customer Account Sales Reports, Enterprise Account Sales Reports and the Chai Shop & Co. Sales Dashboard for viewing sales information.	High
6	Business rules, etc.	The system should apply validation rules to Employer Account, Customer Account and Enterprise Account records and automate business processes using a Schedule-Triggered Flow.	High
7	Compliance to laws or regulations	Customer and business information should be managed securely within the Salesforce CRM according to the access and security controls configured in Salesforce.	Medium
8	Other	The system should provide custom objects, custom tabs, a dedicated Chai Shop & Co. Lightning App, Global Picklist, custom fields and relationships for organized CRM management.	High

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
1	Performance & Speed	The CRM should allow users to access customer, account, order and reporting information efficiently through Salesforce Lightning Experience.	Records, reports and dashboards should load and operate efficiently in the Salesforce environment.
2	Scalability	The system should support the addition of more customer accounts, employer accounts, enterprise accounts and orders as the business grows.	The CRM should allow new records and business information to be added without changing the basic application structure.
3	Security & Data Privacy	Customer and business information should be protected through Salesforce user access, permissions, roles and security settings.	Only authorized users should be able to access or modify the information permitted to them.
4	Reliability & Availability	The CRM should provide reliable access to customer, order, account, automation and reporting features through Salesforce.	Required CRM features should be available and function correctly when users access the Salesforce application.
5	Usability & Accessibility	The application should provide an organized and user-friendly interface for managing accounts, orders, automation, reports and dashboards.	Users should be able to easily navigate the Chai Shop & Co. Lightning App and perform required CRM activities.
6	Other – Maintainability	The CRM should be easy to maintain and update by adding or modifying fields, layouts, record types, validation rules, flows and reports when required.	Administrators should be able to update the Salesforce configuration without redesigning the complete application.
