Project Title	Chai Shop & Co–Salesforce CRM implementation
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) report

The proposal report presents the implementation of a Salesforce-based Customer Relationship Management (CRM) solution for Chai Shop & Co. The system is designed to manage customers, accounts, orders, automation, reporting, and dashboards in a centralized Salesforce Lightning Experience environment. The project provides a structured approach to customer and business data management while supporting validation, automated communication, scheduled processes, and sales analysis.

Project Overview	
Objective	The primary objective is to design and implement a Salesforce CRM application for Chai Shop & Co. that centralizes customer, account, order, and business information while providing automation, validation, reporting, and dashboard capabilities.
Scope	The project covers the creation and configuration of Salesforce Developer Account resources, Employer Account, Customer Account, and Enterprise Account objects; custom tabs; a dedicated Lightning App; a Global Picklist; custom fields and relationships; page layouts; record types; validation rules; email templates and alerts; schedule-triggered Flow automation; reports; and dashboards.
Problem Statement	
Description	Managing customer, account, order, and sales-related information requires a centralized and structured CRM environment. The project addresses the need to organize business and customer information, support different order processes, maintain data quality, automate communication and business processes, and provide useful sales reporting and visualization.
Impact	Implementing the Salesforce CRM solution provides centralized management of business and customer-related information. Validation Rules improve data accuracy, automation supports customer communication and scheduled processes, and reports and dashboards provide a consolidated view of sales information.
Proposed Solution	
Approach	The proposed solution uses Salesforce Lightning Experience to develop a centralized CRM application for Chai Shop & Co. The implementation organizes information through custom objects, fields, relationships, page layouts, and record types, while using validation rules, email automation, Flow automation, reports, and dashboards to support business processes.
Key Features	- Salesforce Developer Account creation and activation. - Employer Account, Customer Account, and Enterprise Account objects. - Custom tabs for accessing the project objects.

	- Email Alert for automated customer communication. - Schedule-Triggered Flow for scheduled business process automation.

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	Computing environment required for Salesforce development	T4 GPU
Memory	Memory requirement	8 GB
Storage	Storage requirement	1 TB SSD
Software		
Frameworks	CRM platform / application environment	Flask
Libraries	Additional libraries	scikit-learn, pandas, numpy, matplotlib, seaborn
Development Environment	Development and configuration environment	Jupyter Notebook, pycharm
Data		
Data	Source, size, format	Employer Account, Enterprise Account, Order, and Sales information; specific size and file format are not specified
